Customised on you.

The best solution is to
adapt our solutions.

For more than 30 years, we at the Necto Group have been working in the distribution of lighting, electronics and electromechanical materials, with an approach that is unique and closely linked to product customisation.

We believe there is an enormous gap between selling a product and proposing a solution. And it is here where we take great pleasure in injecting all our experience and creativity. Working together with our clients, we find the solution that best suits their needs, customising our products to provide a service that is a unique and appropriate.

To this end, the collaboration between our technical department and suppliers is crucial. Our suppliers are carefully selected from among the most important companies in the sectors in which we operate. It is an invaluable partnership that enables us to create customised solutions for companies that operate in both the electronics and electromechanics sector and the lighting industry.

The way to make a choice simple.

THE RIGHT CHOICE AMONG A WIDE RANGE OF PRODUCTS.

Thanks to the scale and variety of what we offer, we can respond to the needs of our clients with a complete, comprehensive range of products, whether it's for the electromechanical sector, or electronics and lighting.

But it takes more than a range of products to provide concrete solutions for clients, however vast it may be. This is why we regard our consultancy service to be a strategic one, identifying the best option from a whole host of proposals, according to the specific needs our clients put forward.

Such a comprehensive service means our clients need only ever turn to a single point of contact. They can rest assured of finding solutions that will accommodate the needs of their entire production operations, whether related to electromechanics, electronics or lighting.

SAFETY MATTERS, PARTNERS TOO.

We make a point of only working with the best companies on the market. In turn, thanks to the professionalism and expertise we have demonstrated in over 30 years in business, we have become certified partners for the distribution of their products.

Working with these companies not only enables us to give our clients innovative and certified products. Above all, it means we can offer solutions that are safe and reliable, designed around specific needs and developed in partnership with key market players.

Procedures, laboratory tests, specific information systems and clear rules are just some of the ingredients that go into a recipe that, every day, enables us to bring the highest quality standards to the market.

THE QUALITY THAT WORKS.

At the base of every good decision, there is the experience of qualified technicians with the required expertise, enabling us to ensure our standards remain high.

Having the best partners is not enough. For this reason, our technical office performs quality checks on every single component, and is always on hand to provide our clients with advice or clarification.

Behind every customised solution, there is the painstaking work of an experienced team on whom you can rely, and who value ongoing research above anything else.

— SAFETY AND RELIABILITY

— WIDE RANGE

— CERTIFICATIONS AND QUALIFIED SUPPLIERS

Highly specialized
in finding what
you need.

More than 30 years in the business has brought us into contact with thousands of clients. Thanks also to the variety of markets we work in on a day-to-day basis, we have become specialists in several sectors such as electromechanics, electronics and, last but not least, lighting.

Continuous improvement, but above all the interdisciplinarity that comes from this, drives us to take the knowledge and experience we gain from one sector to another, offering our clients advice that is more precise and high-performing solutions.

SPECIALISATION IN VARIOUS SECTORS

LIGHT CUSTOMISATION FOR REAL LIFE SITUATIONS.

Lighting

IoT Light is our ambitious lighting project. A project based not only on a wide range of high quality products, but above all, on the important capacity to listen. The choice of lighting, in fact, is such a personal matter, it would be impossible to help our clients, without first learning to listen carefully to their needs. In this respect, we could say that the key characteristic of **IoT Light** is precisely our ability to customise quality, high performing products based on what our clients actually need.

SMALL ELEMENTS, GREAT PARTNERS.

Electromechanics

We have been in the electromechanical business for over 30 years and, thanks to this experience, we are able to select the best partners, thereby ensuring you of quality products that are long lasting and completely safe to use. We not only ask our partners to supply us with certified and approved products which guarantee a very high number of cycles. Most importantly, we ask for their full collaboration in offering our clients customised solutions, designed around their specific requirements.

COMPOSING YOUR IDEAS.

Electronics

Our experience and technical expertise have turned us into the ideal partner for all those companies that are not only looking for the best brands of electronic components, but real customised solutions. The result of this is not just a simple circuit board, but an effective and targeted solution to a real problem. We like to think of ourselves as not just being a supplier of electronic materials, but a Solution Provider that is always on hand for its clients to analyse the best solutions and to provide ongoing technical assistance.
