

PUSH-SNAP touch-spring technology

DC New Products Overview

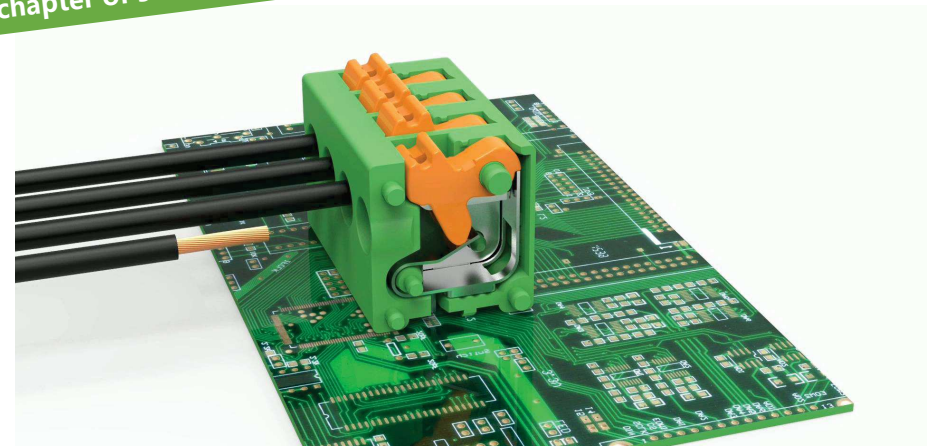

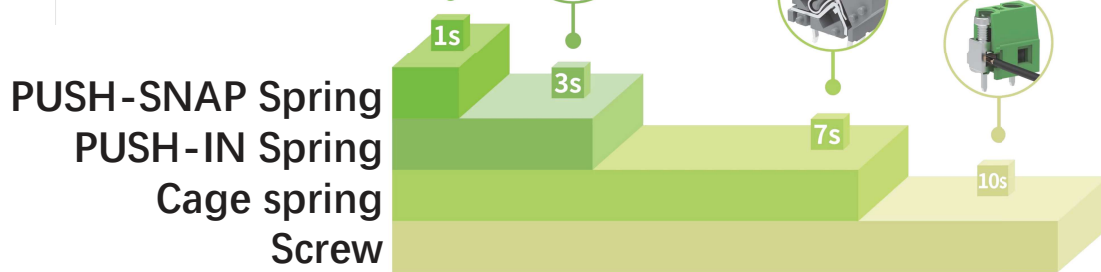

Revolutionary technological breakthrough - PUSH-SNAP touch-spring termination

- Compared with the PUSH-IN spring connection, DEGSON's unique **PUSH-SNAP touch spring** supports tool-less connection of all types of conductors, **even flexible wires without ferrule can be directly inserted**, further reduce the wiring time by 60%!

A whole new revolution in the field of electrical connections!

Ideal for realizing the future of automated wiring!

A new chapter of smart connectivity is about to begin!

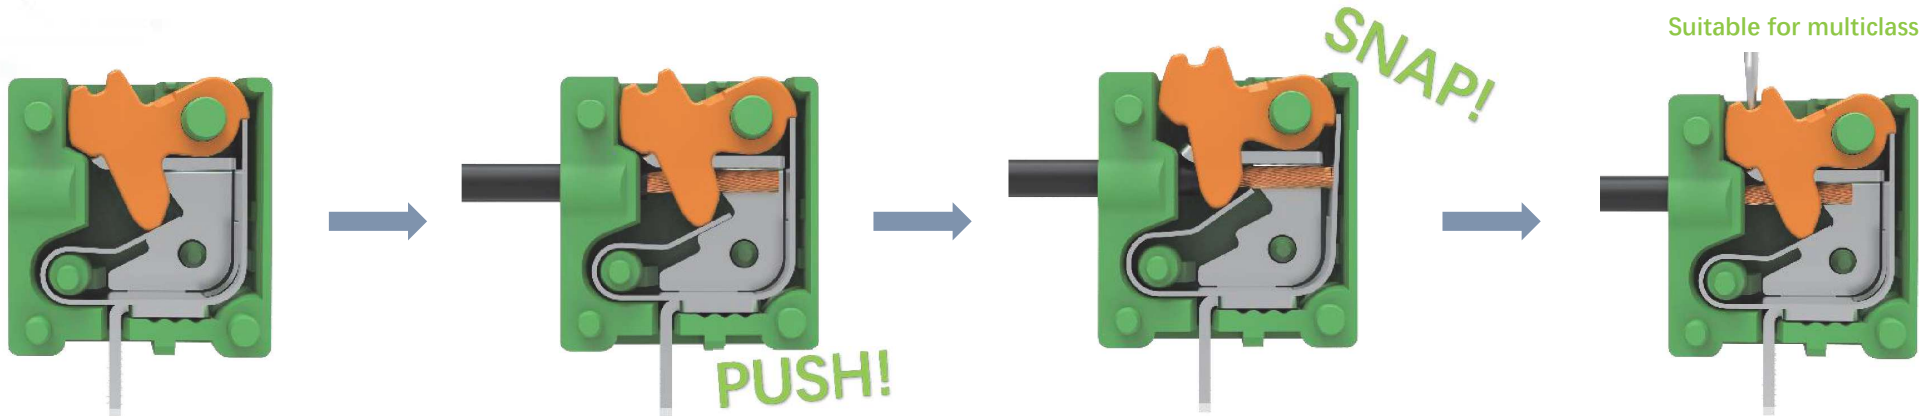

Comparison of wiring time under the same condition!

DC New Products Overview

Increase efficiency at every step - PUSH-SNAP touch-spring termination

Suitable for multiclass conductors

1, The wiring spring is already open at the factory and can be judged by the position of the orange button.

2, places the stripped wire directly into the blocks and to the end, no preparation required!

As soon as the wire comes into contact with the spring, the spring is triggered and the wire is clamped. A clear "click" sounded, indicating that the connection is complete!

Depressing the button releases the wire and reset spring to its initially open state, ready for the next wiring.

Flexible and efficient installation

Simple and convenient operation

Easy and effortless unwinding

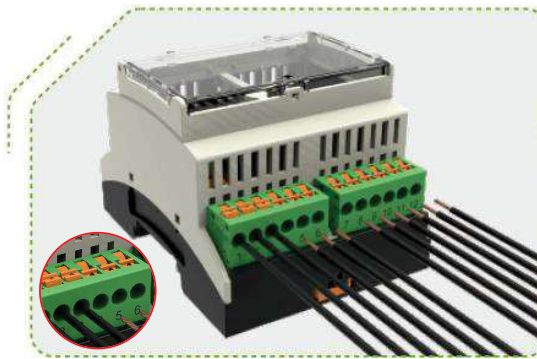

DC New Products Overview

Product Advantages-PUSH-SNAP touch-spring termination

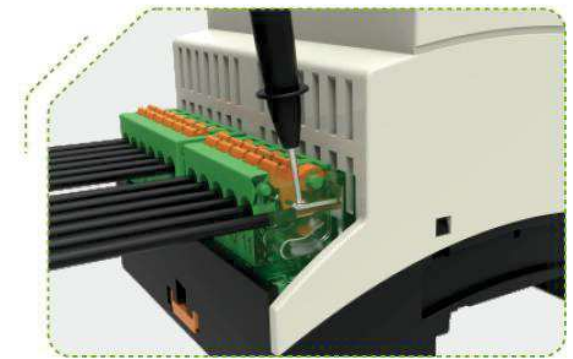

Flexible combination of configurations

Modular design can be quickly and flexibly composed of different bits, different colour of the electrical connection between the faster delivery cycle.

Dual safety marking

Visual, auditory double feedback, you can judge whether the connection is complete by the position of the button and the crisp "click" sound, the use of more secure.

Test holes

Integrated test holes on the buttons make later electrical testing and maintenance work more convenient.
